2007 Step Inside Magazine
Best of web

2007 Dynamic Graphics Magazine
RE:Design winner

Education

Carnegie Mellon University
BS Biology/Computer Science Track

Experience

UX Design Lead at Aires

2017 - Current

Aires is a relocation management company that built their own suite of enterprise applications without any understanding of user-centered design. I was brought on board to introduce user-centered design thinking and to provide a strategy for redesigning their customer experience and the supporting software ecosystem.

- To help Aires create a coherent customer service experience, I deconstructed their whole software ecosystem to identify root design issues and to establish a roadmap which included new UX flows and design patterns for mobile, tablet, and web.
- I led sessions to educate management & stakeholders on design thinking and worked closely with the design and development team to mentor them on the best practices of user-centered design.
- To help Aires transition from waterfall to agile methodology, I introduced design deliverables such as storyboards, wireframes, flows, and the practice of frequent user-testing with prototypes to validate ideas.

Sr Designer at UPMC Enterprises

2013-2016

UPMC Enterprises builds new products for the health care industry. As a senior designer, I led a team of designers and developers to build health care applications from the ground up.

- When tackling new product ideas, I spearheaded user-research, user-testing, and produced all UX design deliverables. These products include a mobile messaging app to help hospital staff coordinate their efforts, and a tele-medicine tool to connect doctors with remote nursing homes.
- We had a diverse team so I provided mentorship to junior level designers to help them navigate through design challenges as well as provide career guidance.

Sr Designer at PNC Bank

2011 - 2013

At PNC bank I was part of a team of designers who helped to create a seamless customer journey through online and retail channels. As a senior designer I was responsible for the suite of applications used by wealth management clients. I helped design and launch PNC's first wealth management mobile app called Wealth Insight.

Interactive Designer / Developer

1998-2011

Prior to PNC bank, I worked as an interactive designer at various creative agencies including SapientRazorfish, REI Barkley, and ThoughtForm. With my background in computer science, I also worked as a front-end developer at various IT consulting firms right out of college, until I discovered my true passion in UX/UI design.
